## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11, drawn to etching a semiconductor to form grooves, classified in class 438, subclass 700.
  - II. Claims 13-16, drawn to method of cleaning using an automatic process, classified in class 134, subclass 18.
  - III. Claims 17-32, drawn to compositions for cleaning semiconductors, classified in class 510, subclass 175.
  - IV. Claim 33, drawn to process for cleaning semiconductors, classified in class 134, subclass 1.3.
  - V. Claim 34, drawn to process for cleaning semiconductors, classified in class 134, subclass 1.3.

It should be noted that claim 12 has not been restricted as the claim depends from a claim which does not exist. As such the examiner cannot classify this claim.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and the remainder of the groups are related as product and process of use.

The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the process for using the product can be

Art Unit: 1751

practiced with materially different product. For example water alone can be used as the processing solution for each of the process groups.

3. The remainder of the inventive groups are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions require different modes of operations which in turn create a different effect on the substrate. As such these inventions are unrelated and would require a distinct search for each group.

4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In

Art Unit: 1751

either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
